

# SANTRAX® ANALYZER

The **Santrax® Analyzer** is next generation analytics technology that aggregates data across multiple source systems. It provides timely information, enhances clinical operations, improves quality outcomes, ensures revenue accuracy and helps manage risk for your home healthcare agency. The **Santrax® Analyzer** interfaces with virtually any billing/OASIS collection database, allowing you to leverage and enhance your current technology investments.

## FUNCTIONALITY AND BENEFITS

The **Santrax® Analyzer** enables your organization to combine clinical and financial data from multiple source systems, thereby allowing you to proactively review essential operational and financial performance. Using the power of data-driven healthcare information, **Santrax® Analyzer** helps you to deliver the highest quality care to your patients, while achieving optimum results.

Powerful capabilities include:

- User-defined key performance indicators
- Easy-to-use search tool
- OASIS assessment accuracy audits
- Detailed utilization, outcome and financial information
- Performance benchmarking
- Flexible forecast tool for more effective episode management
- Customizable Assessment Audits

## DASHBOARD – PERFORMANCE INDICATORS

The advanced information dashboard provides immediate access to your key performance indicators, including the ability to:

- Analyze clinical, quality, financial and operational results
- Immediately drill-down into assessments and episode details
- Set threshold targets to alert you to critical variances
- Filter information views by important data elements such as Agency, Branch, Team, Referral Source, or Diagnosis

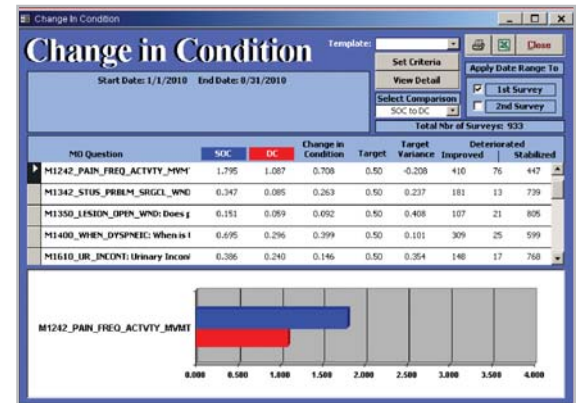

## THE ASSESSMENT AUDITOR

The Assessment Auditor identifies and corrects OASIS inconsistencies. Audit rules are applied to your assessments, ensuring that your OASIS data is accurate before it is locked and sent. You control the audits – turn them on or off, e-mail them to any staff only when necessary, modify existing rules, or create your own customized rules. Statistical results allow you to investigate and verify audit rule validity.

# SANTRAX® ANALYZER

## OUTCOMES MODULE MONITORS PATIENT OUTCOME PROGRESS

From SOC through discharge, the Outcomes Module calculates outcome scores for any OASIS item. It enables your agency to analyze visit utilization and clinician impact on outcomes, as well as identifying improvement opportunities and false outcomes due to OASIS error. Additionally, you can study results by agency, date, office, team, case manager, patient, ICD-9 and HHRG.

## WEB-BASED BENCHMARKING MODULE

Web-based benchmarking reports provide timely results that are comparable and relevant. You can analyze data in real-time, allowing you to get the answers quickly to drive operational performance improvement.

## MULTI-PAYER MODULE

The Multi-Payer Module expands the **Santrax® Analyzer** functions to non-Medicare OASIS and episode data available in your billing system. The **Santrax® Analyzer** creates 60-day episodes with HHRGs and PPS revenue for Medicare Managed Care and Medicaid patients.

Enable your agency to track and benchmark your utilization experience for each patient to assist in negotiating with the payors.

- Track actual against authorized visits (includes an "Alert report")
- Enter and track "authorized" Medicare for any patient in order to track visit activity against care-plan "targets"
- Provide admission-based reporting
- Receive Alert reports when patient is nearing authorization target or a different report when authorization time-period is coming to an end
