

# SANTRAX® FIXED LOCATION TRACKING

## SERVICING PATIENTS WITHOUT A PHONE

**Santrax® Fixed Location Tracking (FLT)** can be used to validate home healthcare visits at the point-of-care in rural or hard to reach areas, when no cell towers or landlines are available. FLT is part of **Santrax® Telephony's** Assured Coverage program, providing you with the most robust offering to ensure visit verification compliance. With the FLT you can validate both the "time in" and "time out" of visits at the point-of-care.

The **Santrax® Fixed Location Tracking** unit can be used either as a standalone solution, or in a layered approach as an addition to a landline or GPS solution for additional security and visit verification.

## ASSURED COVERAGE

Sandata is the only company that assures accurate coverage through a complete set of electronic visit verification technologies. In addition to our market-leading **Santrax® Telephony (STx)** solution, Sandata also offers real-time GPS technology, verifying employee location via cell phones in addition to Fixed Location Tracking when no phone service is available. Your agency can feel confident that visit verification is occurring at the point-of-care, helping to guard against allegations of fraud and abuse, while improving clinical care.

## HOW DOES FLT WORK?

The FLT is affixed to a surface within a patient's home. When the aide arrives at the home/facility, the aide presses the appropriate button and records the 6-digit reading from the FLT, as well as the current date and time. When the aide is preparing to leave the home/facility at the end of the visit, the aide then presses the appropriate button again and records the 6-digit reading from the FLT, along with the current date and time. They should also record any tasks performed to facilitate data entry at a later point.

The aide can either enter the data when they arrive at a location with a phone, placing a **Santrax® Telephony** call and entering the values from the visit, or they can enter the data on a mobile phone at the point-of-use.

The **Santrax® Telephony** system takes the FLT values and creates visit data in the system as though phone calls had been made at the beginning and end of the visit.
