

SANTRAX[®] Electronic Visit Verification[™]

Sandata is uniquely positioned at the center of the home care network. Our solutions maximize the value of every in-home encounter by *Ensuring The 5 Rights of Care[®]*:
Right participant, Right time, Right location, Right caregiver,
Right plan of care.

Sandata's **Assured Coverage[™]** program combines multiple visit verification technologies to ensure patient coverage regardless of location.

Telephonic Visit Verification[™] (TVV[™])

- Uses Automatic Number Identification (ANI) technology to validate telephone calls to log in and log out, recording tasks, time, and location in real-time.

Mobile Visit Verification[™] (MVV)

- Real-time GPS technology, verifying caregiver location and visits via GPS enabled devices.

Fixed Visit Verification[™] (FVV[™])

- Patented technology to verify visits when no landline or cellular service is available.

Enabling care plan compliance, and improving participant care and quality

SANTRAX® Electronic Visit Verification™

Features and Add-On Modules

Santrax® Electronic Visit Verification™ can be enhanced with a variety of add-on features that enable your agency to obtain the specific functionality it needs, including:

No Show Alert - Real-time notifications of late or missed visits enabling you to redeploy staff to ensure compliance with the plan of care and collect the revenue associated with that visit.

Broadcast Messaging - Simplifies staff notification by enabling supervisors to create, schedule and send voice messages regarding schedule changes, no shows and other developments.

Mileage Tracking - Eliminates inaccuracies and saves administrative time through automatic mileage calculation to ensure proper reimbursement.

Schedule Prompting - Improves time management by prompting caregivers with scheduling and short-visit reminders if they attempt to check out early.

Plan of Care Entry - Enter care plan data into Santrax® Electronic Visit Verification™.

Speaker Verification for Employees and Clients- Biometric voice recognition technology that is used by either the caregiver and/or the client to ensure the right caregiver is serving the right participant.
