

UCI SAVES HOURS OF ADDED WORK WITH A MORE EFFICIENT AND ACCURATE PAYROLL SYSTEM.

Unlimited Care, Inc. (UCI)—a home health aide provider—is working with Sandata and Paypro to streamline their employee reporting and payroll processing for over 3,000 employees throughout New York State. The shift to the integration between Sandata and Paypro in 2015 has automated a manual process of workforce reporting and processing—turning hours of work into just minutes for each pay period.

THE CHALLENGE

A mobile workforce with thousands of health care employees requires a tremendous amount of reporting.

UCI has 16 offices in New York and over 3,000 employees working with patients in their homes and care facilities to help them achieve greater independence. Their staff includes personal care aides (PCA), home health aides (HHA), licensed practical nurses, registered nurses and 170 office employees. With so many employees all over New York state plus mandatory union and industry reporting, UCI was looking at a ton of paperwork to process.

UCI is required to generate reports on their 401(k) program, payroll billing and workers comp. Before the partnership with Paypro, these reports had to be manually built by pulling PDF documents month by month and sending completed forms via fax. The manual compiling and reporting of workforce documentation plus the addition of checking for accuracy was extremely time-consuming for UCI.

THE SOLUTION

Thanks to the integration of Sandata and Paypro, UCI's payroll and reporting is now fully automated.

The partnership between Sandata and Paypro is the key to UCI's efficient workforce reporting. Sandata helps employees seamlessly gather real-time data on their patient visits and Paypro uses this information to efficiently process the payroll and generate all necessary reports. The implementation of this new system was easy and resulted in automating a time consuming manual process. UCI's director of HR, Judith Wright values the simplicity of the new process, "when we do payroll reporting, I've got a template that I put in all the details and it does it automatically."

THE RESULTS

The activation of Paypro's payroll and reporting systems has saved a tremendous amount of time — turning hours of work into minutes.

UCI processes over 2,000 checks per week. The addition of Sandata and Paypro has reduced the hours of reporting per pay period to mere minutes. UCI is now able to process payroll, conduct audits and create multiple payroll reports all within one complete system.

Now all reports are pulled from Paypro and generated through Excel. This allows for easy adjustments and improves accuracy for all payroll reports. Since the adoption of Sandata and Paypro, UCI has not had to pay any penalties and is proud to report zero payroll issues.
